PROFESSIONAL SUMMARY

Senior-leaning Gameplay Engineer with **5+ years** shipping multiplayer experiences in **Unreal Engine 5**. Deep expertise in **C++**, the **Gameplay Ability System (GAS)**, and server-authoritative networking — including **Iris replication**, **client prediction**, **server rewinding**, and lag compensation. Currently architecting the GAS foundation and advanced prediction pipeline for **Revenge**, a PvE multiplayer extraction game at **Everreach Labs**. Proven track record building combat systems, animation pipelines, and performance-critical gameplay code across commercial AAA and indie titles.

TECHNICAL SKILLS

Engine	Unreal Engine 5 · UE4 · C++ · Blueprints
Networking	Iris Replication · Client Prediction · Server Rewind · Lag Compensation · RPCs · Network Roles
Systems	Gameplay Ability System (GAS) · Attribute Sets · Gameplay Effects · Ability Tasks · Gameplay Cues
Gameplay	Combat Systems · Hit Detection · Motion Warping · Animation Blueprints · IK · Behaviour Trees
Audio	MetaSounds · Dynamic Audio Systems
Tools	Git · Perforce · Rider · Visual Studio · Unreal Insights

WORK EXPERIENCE

Everreach Labs	Feb 2026 – Present
Gameplay Engineer · Remote · UAE	
- Architecting the GAS foundation for <i>Revenge</i> — a PvE multiplayer extraction game — establishing ability pipelines, attribute sets, and gameplay effect frameworks from the ground up. - Implementing advanced client prediction within GAS, ensuring responsive ability activation and rollback-safe state management across unreliable network conditions. - Integrating Iris replication system for scalable, high-performance object state synchronisation across large player counts. - Defining architectural standards and coding conventions to ensure maintainability at scale.	
Seedify · Seedworld	Sep 2024 – Oct 2025
Mid Gameplay Engineer · Remote · UK	
- Shipped gameplay features for <i>Seedworld</i>, an AAA-quality open-world multiplayer title built in Unreal Engine 5. - Designed and implemented combat systems in C++ using GAS — ability activation, damage attribution, status effects, and cooldown management. - Debugged and optimised complex networked gameplay code; profiled with Unreal Insights to eliminate hitches in replication-heavy scenarios. - Collaborated with designers and animators to iterate rapidly on gameplay feel and responsiveness.	

Freelance · Unreal Engine Developer

May 2021 – Present

Game Developer · Remote

- Delivered bespoke gameplay systems for multiple clients across C++ and Blueprint: character movement, weapons, inventory, and multiplayer replication.
- Built a **multiplayer shooter framework** (public repo) featuring **server-side lag compensation**, hit scan with server rewind, and optimised weapon state replication.
- Implemented **Motion Warping**-based stealth assassination system syncing two characters through IK warp targets and two-person animation blending.
- Developed physically-simulated **bow & arrow** with full IK hand placement and draw-strength trajectory simulation.

FuGenX Technologies

May 2021 – Oct 2022

Game Developer · Remote · Dubai

- Developed combat gameplay logic and AI behaviour in **C++ and Blueprint** within Unreal Engine.
- Enhanced and refactored existing game mechanics; reduced Blueprint overhead by migrating hot-path logic to native C++.

LynxGamez INC

Sep 2020 – Apr 2021

Game Developer Intern · Remote · Istanbul

- Contributed to multiplayer feature development in **Unreal Engine / C++**; participated in full development lifecycle from prototype to delivery.
- Debugged networked gameplay features and optimised replication for mobile-targeting builds.

EDUCATION

Bachelor's Degree — Computer Science

Azad University, Tehran

2023
